(54) Title: **PRESSURE PACKAGE SYSTEM**

(57) Abstract: A pressure package system for providing a
working pressure on a fluid included in a pressure package,
the system being provided with a pressure package (2) in
which a product chamber (4) is included for holding the
fluid and in which a working pressure chamber is included
for keeping a propellant at the working pressure, the system
being further provided with a pressure controller (5) and
a high-pressure chamber (6) connected with the pressure
controller for keeping the propellant in supply at a relatively
high pressure, the pressure package system being further
provided with a wall (7) which is designed to be movable
relative to the pressure controller, a first side (8) of the wall
bounding the working pressure chamber at least partly and
a second side (9) of the wall, facing away from the working
pressure chamber, bounding the product chamber at least
partly.
